

CUSTOMIZABLE PRESENTATION ENVIRONMENT

ABSTRACT

A customizable environment is disclosed including an interactive presentation having a plurality of object placeholders, each for holding a presentable object or a presentable reference to an object. Each placeholder has a selector for selecting the presentable object or reference held therein and a selector for selecting the placeholder. The customizable interface further includes a data store for storing the presentable objects. The presentable objects are linked to indicate the relationship between the objects whereby the arrangement of the presentable objects, references, or both within the placeholders corresponds at least in part to the manner in which the presented objects and references are linked.
